---------------------------------	--

PROJECTS

FROM sep. 2017 TO jun. 2018	React-Native Mobile App/Senior Capstone Project <i>Oregon State University</i> <p>For my senior project I led a team through the entire software development life cycle of a React-Native mobile application, providing both IOS and Android usability. The goal of the project was to successfully design and code a social networking journaling application. The application allowed users to write posts in a longer format with embedded images, as well as follow and explore other journals. The application used a variety of tools, including React-Native, a framework for JavaScript, and PHP for networking to the database. The database was written in SQL and housed on a Firebase server.</p>
